EXECUTIVE SUMMARY

The Golden Plains Unified School District (District) is justified to collect the legal maximum fee of \$4.08 per square foot of residential development as authorized by Government Code Section 65995 (Level I fees), as future residential development creates a school facility cost of \$9.65 per square foot. The District is also justified to collect the legal maximum fee of \$0.66 per square foot of development on all categories of commercial/industrial development (except rental self-storage), as those categories of development create school facility costs ranging from \$1.64 to \$7.00 per square foot of future development, even when fees from linked residential units are accounted for. Fees for new rental self-storage should be established on an individual case-by-case basis.

The District's justification for collecting fees on future residential and commercial/industrial development is based on the following facts and projections:

1. The District's 7-8 grade level enrollment is larger than its pupil capacity. The District, therefore, does not have sufficient capacity to house students generated by future development. These students will require the District to acquire new school facilities.
2. Each square foot of future residential development creates an estimated school facilities cost of \$9.65. All categories of commercial/industrial development (except rental self-storage) create an estimated school facilities cost ranging from \$1.64 to \$7.00 per square foot of commercial/industrial development, even when fees from linked residential units are accounted for.
3. If the District collects the current maximum fee on residential development authorized by Government Code Section 65995 of \$4.08 per square foot, fee revenue will offset 42.3 percent of the school facility cost attributable to residential development. If the District collects the current maximum fee on commercial/industrial development authorized by Government Code Section 65995 of \$0.66 per square foot, fee revenue will offset from 9.4 percent to 40.2 percent of the school facility cost attributable to commercial/industrial development (except rental self-storage). For both residential and commercial/industrial development, the fees authorized by Government Code Section 65995 are fully justified.

The fees outlined above all meet the requirements of Government Code Section 66001 (the nexus requirements), that is, a reasonable relationship exists between the amount and use of the fees and the developments on which they are charged.

End of Summary

INTRODUCTION

This Report analyzes the cost of providing school facilities for students generated by future residential and commercial/industrial development projects in the Golden Plains Unified School District (District). *School Facility Consultants* has been retained by the District to conduct the analysis and prepare this Report.

A. Purpose and Scope

The purpose of this Report is to show that the District meets pertinent requirements of State law regarding the collection of developer fees.

State law gives school districts the authority to charge fees on new residential and commercial/industrial developments if those developments generate additional students and cause a need for additional school facilities. Government Code Section 65995 authorizes school districts to collect fees on future development of no more than \$4.08 per square foot for residential construction and \$0.66 for commercial/industrial construction (Level I fees). Level I fees are adjusted every two years according to the inflation rate for Class B construction as determined by the State Allocation Board. Government Code Section 66001 requires that a reasonable relationship exist between the amount and use of the fees and the development on which the fees are to be charged.

This Report:

- identifies the cost of providing school facilities for students generated by future residential and commercial/industrial development in order to justify the collection of fees on those developments, and
- explains the relationship between the fees and the developments on which those fees are to be charged.

B. Brief Description of the Golden Plains Unified School District

The Golden Plains Unified School District is located in Fresno County. District boundaries may be seen in greater detail on maps available at the District Office.

The District currently serves over 1,600 students in grades K-12 and operates four K-8 schools, one comprehensive high school, and one continuation high school.

Opportunities for new residential development and additions to existing residential units exist in the District. This residential construction will be subject to Level I fees. As described in this Report, the costs to the District will outweigh the fees the District will receive at any level of residential development.

To accommodate this future residential development, the District plans to construct additions for their K-8 elementary school campuses. In addition, the District may purchase or lease portable classrooms to use for interim housing while permanent facilities are being constructed.

C. Data Sources

The data sources for this Report are listed in the table below and referenced throughout the Report.

Data Sources

Data Type	Data Source
Residential development rates	County of Fresno; City of San Joaquin; Golden Plains Unified School District (GPUSD); Local development project information
Enrollment history	CBEDS
Pupil capacity of District schools	GPUSD
Student generation rates for housing units	United States Census
Employees per square foot of commercial/industrial development	San Diego Association of Governments
Number of workers per household	United States Census

D. Outline of the Report

The Report is divided into six sections. The sections:

1. Identify the District's school facility needs,
2. Calculate the financial impact on the District of future residential and commercial/industrial developments,
3. Compare the projected revenues from developer fees to the costs of providing facilities for students generated by future developments,
4. Show that the District satisfies the requirements of Government Code Section 66001 with respect to the collection of developer fees,
5. Summarize other potential funding sources for school facilities, and
6. Present recommendations regarding the collection of developer fees.

End of Section

I. DISTRICT FACILITY NEEDS

This Section describes the District's requirements for school facilities. Specifically, the following subsections:

- A) Identify the District's current enrollment,
- B) Identify the District's current capacity,
- C) Subtract the District's current enrollment from the District's capacity to calculate the District's facility needs, and
- D) Describe the District's plan to fulfill its facility needs.

A. Current District Enrollment

The Report uses the California Basic Educational Data Systems (CBEDS) to track the District's total enrollment over the last five years (see Table 1-1).

Table 1-1
District Enrollment History

Grade	2015/16	2016/17	2017/18	2018/19	2019/20
K-8	1,310	1,263	1,192	1,106	1,092
9-12	468	446	506	543	519
Total	1,778	1,709	1,698	1,649	1,611

B. Pupil Capacity of District Facilities

The Report calculates the pupil capacity of the District by (1) taking an inventory of the classrooms that are included in the District's long-range facility plans and (2) applying School Facility Program (SFP) classroom loading standards to that inventory.

1) Classroom Loading Standards

School Facility Program (SFP) classroom loading standards are listed in Table 1-2.

Table 1-2
Loading Standards

Grade Level	Number of Students Per Classroom
K-6	25
7-8	27
9-12	27

Source: California State Standards

2) Classroom Capacity

Table 1-3 lists the classroom capacity of the District by grade group. The capacity is determined by multiplying the number of classrooms in the District by the appropriate loading standard identified in Table 1-2.

The classroom count was established by conducting an inventory of the District's school sites. Any facilities that are not part of the District's long-range facility plan are not included in this count. Facilities not present in the classroom count include: (1) District-owned and leased portable classrooms, (2) classrooms less than 700 square feet, (3) pull-out type classrooms such as computer labs, (4) spaces currently being used as classrooms not originally designed as such, and (5) classrooms not owned by the District.

Table 1-3
Classroom Count and Pupil Capacity Based on
District Loading Standards

Grade Group	Number of Classrooms	Number of Pupils Per Classroom	Pupil Capacity
K-6	42	25	1,050
7-8	3	27	81
9-12	27	27	729
Total	72	N/A	1,860

3) Percent Utilization

Table 1-4 shows the percentage of classroom capacity the District is utilizing by dividing the District's current enrollment by the capacity listed above (Table 1-3).

Table 1-4
2019/20 Classroom Utilization

Grade Group	Pupil Capacity	2019/20 Enrollment	Percent Utilization
K-6	1,050	814	77.5%
7-8	81	278	343.2%
9-12	729	519	71.2%
Total	1,860	1,611	86.6%

As Table 1-4 shows, the District is currently operating over 100 percent of capacity at the 7-8 grade grouping.

C. District Facility Requirements

Table 1-5 calculates the District's requirements for school facilities by subtracting its capacity from its enrollment.

Table 1-5
District Facility Needs/Unhoused Students

Grade Group	2019/20 Enrollment	District Capacity (Pupils)	Unhoused Students
K-6	814	1,050	0
7-8	278	81	197
9-12	519	729	0
Total	1,611	1,860	197

As Table 1-5 shows, the District will need additional facilities for 197 7-8 grade level students.

D. Plan for Fulfilling School Facility Needs

In order to provide facilities for the unhoused students listed in Table 1-5, the District plans to construct additions to its existing K-8 campuses. In addition, the District may lease additional portable classrooms to use for interim housing while permanent school facilities are being constructed.

Table 1-6
District Facility Plan

Projects	Pupil Capacity	Time Frame
New K-8 School Additions	197	5 years
Interim Housing	N/A	throughout next 5 years
Total	197	N/A

End of Section

II. FINANCIAL IMPACT ON THE DISTRICT OF FUTURE RESIDENTIAL DEVELOPMENT

This Section quantifies how future residential development financially affects the District.

Future residential development will generate additional students in the District. As shown in the previous section, adequate school facilities do not exist for these students. Future residential development, therefore, financially affects the District by generating a need for additional school facilities that the District must acquire at some cost. This section describes this cost in three ways: (1) dollars per K-12 student generated from future development, (2) dollars per housing unit and (3) dollars per square foot of future development.

In order to calculate the financial effects described above, the Report needs to first calculate the number of students that will live in new housing units in the District and the per-pupil cost of providing school facilities for elementary, middle and high school students.

A. Number of Students per New Housing Unit

This Report estimates the number of students that each future residential housing unit will generate by analyzing the rate at which previously built housing units have generated current District pupils.

The Report calculates this student generation rate by dividing the number of K-12 students enrolled in the District in the 2018/19 school year by the total number of housing units in the District based on data collected from the 2014-2018 American Community Survey published by the United States Census Bureau.

Table 1-7 lists the student generation rates for the District.

Table 1-7
Student Generation Rates

Grade Group	Students per Residential Housing Unit
K-6	0.407
7-8	0.133
9-12	0.266
Total	0.806

B. Cost of Providing School Facilities

The per pupil cost of providing school facilities for unhoused students is outlined in Table 1-8. The costs are based on the 2020 School Facility Program allowances for construction of new school facilities adjusted to account for the percentage of Special Day Class pupils attending the

District and include amounts for site development. The cost of the District's housing plan is based on the District's current weighted SGR for grades K-6 and 7-8 for new K-8 additions. The District may experience interim housing costs while permanent facilities are being constructed. Interim housing costs, however, are not quantified in this Report.

Table 1-8
Per-pupil Facility Costs for K-12 Students

Grade Group	Project	Total Facility Cost	Pupil Capacity	Per-Pupil Facility Cost
K-8	New Elementary Addition	\$5,001,830	197	\$25,390
K-8	Interim Housing Costs	N/A	N/A	N/A

C. Cost of Providing School Facilities per New K-12 Student Generated by Future Development

The Report determines the facility cost of a K-12 student generated by future development by calculating a weighted average of the facility costs for elementary, middle and high school students.

The relative size of the three SGRs for residential housing units tells us that 67.0 percent of students from new units will be K-8 elementary students and 33.0 percent will be high school students. Table 1-9 weights each per-pupil facility cost by the appropriate percentage and provides a weighted average facility cost for K-12 students from future residential development.

Table 1-9
Weighted Average School Facility Cost for a K-12 Student
From Future Residential Development

Grade Group	Cost Per Pupil	Weighting Based on Student Generation Rate	Weighted Cost Per Pupil
K-8	\$25,390	67.0%	\$17,011
9-12	\$0	33.0%	\$0
K-12	N/A	100%	\$17,011

D. Cost of Providing School Facilities per New Residential Housing Unit

Table 1-10 multiplies the total number of students per housing unit by the facility costs of K-12 students to calculate an average \$13,711 facility cost attributable to future residential housing units.

Table 1-10
School Facility Cost per New Housing Unit

Student Generation Rate	K-12 Per-pupil Facility Cost	Cost Per New Housing Unit
0.806	\$17,011	\$13,711

E. Cost of Providing School Facilities per Square Foot of Future Residential Development

This Report calculates the school facility cost per square foot of future development by dividing the cost per housing unit by the average square footage of housing units.

Based on a review of historical county assessor data for new parcels, this Report estimates that new housing units in the District will have an average square footage of 1,421 square feet.

Table 1-11 shows the school facility cost per square foot of new residential housing units.

Table 1-11
School Facility Cost Per Square Foot of Residential Development

Facility Cost Per Unit	Average Square Footage	Facility Cost Per Square Foot of Development
\$13,711	1,421	\$9.65

End of Section

III. REVENUE FROM FEES ON RESIDENTIAL DEVELOPMENT VERSUS COSTS OF SCHOOL FACILITIES

This Section compares the projected revenues from fees levied on future residential development to the school facility costs attributable to that development.

State law currently caps Level I Fees at \$4.08 per square foot. As demonstrated in the previous section, each square foot of future residential development will generate a school facility cost of \$9.65 per square foot. Any given amount of future development will, therefore, generate more school facility costs than Level I Fee revenue (i.e., for every \$1.00 in fee revenue generated by future development, \$2.36 in school facility costs are generated).

A. Fee Revenue from Residential Development Over the Next Five Years

Based on residential development information provided by the City of San Joaquin, this Report estimates that 23 new residential units will be built in the District over the next five years. For *any* given amount of residential development, however, school facility costs will be greater than fee revenue by a ratio of \$2.36 to \$1.00.

As stated in the previous Section, the Report estimates that new residential units will average 1,421 square feet over the next five years.

If the District were to collect the maximum allowable Level I fee (\$4.08) on residential development, the District would collect \$133,347 in residential developer fees over a five-year projection period.

Table 1-12
Revenue from Residential Developer Fees

New Housing Units	Average Square Footage	Fee Amount	Revenues From Fees on New Housing Units
23	1,421	\$4.08	\$133,347

B. Fee Revenue from Additions to Existing Residences

Fees will also be generated by additions to existing residences. There is no firm basis for estimating the amount of additions to existing homes that may occur in any given year. This Report does not account for the total fee revenue collected from additions to existing residences. However, the fee revenue calculation for additions is the same as for new units. For example, additions totaling 5,000 square feet would generate \$20,400 in fee revenue (5,000 times \$4.08).

C. Fee Revenue from Reconstruction and Redevelopment

Fees will also be generated by single- and multi-family units in redevelopment projects and single- and multi-family units that replace demolished units (to the extent that the new units are

larger than the demolished units). There is no firm basis for estimating the amount of reconstruction and/or redevelopment of existing homes that may occur in any given year, so this Report does not account for the total fee revenue collected from reconstruction and/or redevelopment. However, the fee revenue calculation for reconstruction and/or redevelopment is the same as for new units. For example, reconstruction and/or redevelopment totaling 7,500 square feet would generate \$30,600 in fee revenue (7,500 times \$4.08).

D. School Facility Costs Generated by Future Residential Development

The total school facility cost attributable to future residential development over the next five years is calculated by multiplying the following two factors: (1) the number of new housing units and (2) the facility cost per new housing unit. Table 1-13 shows that the total school facility cost attributable to future development is \$315,353.

Table 1-13
School Facility Cost Generated by Students
from Future Development

New Units	Cost Per New Housing Unit	Total Cost
23	\$13,711	\$315,353

E. School Facility Costs Generated by Additions to Existing Residences

Additions to existing residences will have the same financial effect on the District as new residential units. For example, residential additions of 5,000 square feet will generate an additional three students (assuming the student generation rate for additions is the same as for new residential units) and a school facilities cost to the District of \$51,033 (three students times a per-pupil facilities cost of \$17,011). However, as with fee revenues generated by residential additions, this Report does not account for school facility costs generated by additions to existing residences.

F. School Facility Costs Generated by Reconstruction and Redevelopment

Reconstruction and redevelopment of existing homes will have the same financial effect on the District as new residential development. For example, reconstruction and/or redevelopment of 7,500 square feet will generate an additional five students (assuming the student generation rate for additions is the same as for new residential homes) and a school facilities cost to the District of \$85,055 (five students times a per-pupil facilities cost of \$17,011). As with fee revenues generated by reconstruction and/or redevelopment, this Report does not account for school facility costs generated by this type of work.

G. Extent of Mitigation of School Facility Costs Provided by Level I Residential Fees

Table 1-14 shows that \$133,347 in total residential Level I fee revenue will cover only 42.3 percent of the \$315,353 in total school facility costs attributable to residential development over the next five years. Some of this shortfall may be recovered from fees on commercial development.

Table 1-14
Facility Cost of Residential Development Versus Fee Revenue

Total School Facility Costs	Total Revenues From Fees	Net Facility Cost to the District
\$315,353	\$133,347	\$182,006

H. Senior Citizen Restricted Housing

As required by law, a lower fee, currently the commercial/industrial maximum of \$0.66 per square foot, is established for certain types of residences that are restricted in occupancy to senior citizens. Housing of this type generates employees and has an indirect impact on the school district similar to that from commercial/industrial development projects.

End of Section

IV. FINANCIAL EFFECT ON THE DISTRICT OF NEW COMMERCIAL/INDUSTRIAL DEVELOPMENT

This Section analyzes the costs of providing school facilities for students generated by new commercial/industrial development.

Commercial/industrial development will attract additional workers to the District, and, because some of those workers will have school-age children, will generate additional students in the District. As shown in Section I, adequate school facilities do not exist for these students. New commercial/industrial development, therefore, creates a fiscal impact on the District by generating a need for new school facilities.

The Report multiplies the following five factors together to calculate the school facility cost incurred by the District per square foot of new commercial/industrial development:

- A. Employees per square foot of new commercial/industrial development,
- B. Percent of employees in the District that also live in the District,
- C. Houses per employee,
- D. Students per house, and
- E. School facility cost per student.

The Report calculates each of these factors in the next sections.

A. Employees per Square Foot of Development

As permitted by State law, the Report uses results from a survey published by the San Diego Association of Governments (SanDAG) (see Appendix) to establish the number of employees per square foot of new commercial/industrial development projects.

Table 1-15
Employees Per Square Foot of Commercial/Industrial
Development, by Category

Commercial/Industrial Category	Average Square Foot per Employee	Employees per Average Square Foot
Banks	354	0.00283
Community Shopping Centers	652	0.00153
Neighborhood Shopping Centers	369	0.00271
Industrial Business Parks	284	0.00352
Industrial Parks	742	0.00135
Rental Self Storage	17,096	0.00006
Scientific Research & Development	329	0.00304
Lodging	882	0.00113
Standard Commercial Office	208	0.00480
Large High Rise Com. Office	232	0.00432
Corporate Offices	372	0.00269
Medical Offices	234	0.00427

Source: 1990 SanDAG Traffic Generators Report.

B. Percentage of Employees Residing Within the District

U.S. Census data from the year 2000 (School District Tabulation (STP2) Data, Table P27: *Place of Work for Workers 16 Years and Over - Place Level*), indicates that approximately 22 percent of people working in the District also live in the District.

C. Number of Households per Employee

U.S. Census data from the year 2000 (School District Tabulation (STP2) Data, Table H6: *Occupancy Status* and Table P27: *Place of Work for Workers 16 Years and Over - Place Level*), indicates that there are approximately 1.19 workers per household. Likewise, this data indicates that there are 0.84 housing units for every one worker. The Report, therefore, assumes that each new resident worker in the District will demand 0.84 housing units.

D. Number of Students per Dwelling Unit

As outlined in Section II.A., the Report assumes that 0.806 K-12 pupils will reside in each housing unit.

E. School Facility Cost per Pupil

As outlined in Section II.C., the Report estimates that the school facility cost per K-12 pupil is \$17,011.

F. School Facility Cost per Square Foot of Commercial/Industrial Development

Table 1-16 calculates the school facility cost generated by a square foot of new commercial/industrial development for each of the categories of commercial/industrial projects listed in Table 1-15.

School facility costs for development projects not included on this list may be estimated by using the closest employee-per-square-foot ratio available for the proposed development or by following the District's administrative procedures for appeals of school facility fee imposition.

(continued on next page)

Table 1-16
Facility Cost Per Square Foot of Commercial/Industrial
Development, by Category

Category	Employees per Square Foot	% Employees Residing in District	Dwelling Units per Employee	K-12 Students per Dwelling Unit	Cost per K-12 Student	Cost per Square Foot
Banks	0.00283	0.22	0.84	0.806	\$17,011	\$7.17
Community Shopping Centers	0.00153	0.22	0.84	0.806	\$17,011	\$3.88
Neighborhood Shopping Centers	0.00271	0.22	0.84	0.806	\$17,011	\$6.87
Industrial Business Parks	0.00352	0.22	0.84	0.806	\$17,011	\$8.92
Industrial Parks	0.00135	0.22	0.84	0.806	\$17,011	\$3.42
Rental Self-storage	0.00006	0.22	0.84	0.806	\$17,011	\$0.15
Scientific R&D	0.00304	0.22	0.84	0.806	\$17,011	\$7.70
Lodging	0.00113	0.22	0.84	0.806	\$17,011	\$2.86
Standard Com. Offices	0.00480	0.22	0.84	0.806	\$17,011	\$12.16
Large High Rise Com. Offices	0.00432	0.22	0.84	0.806	\$17,011	\$10.95
Corporate Offices	0.00269	0.22	0.84	0.806	\$17,011	\$6.82
Medical Offices	0.00427	0.22	0.84	0.806	\$17,011	\$10.82

The District generates a school facility cost greater than the Government Code maximum of \$0.66 per square foot for all categories of commercial/industrial development (except rental self-storage).

G. Calculating School Facility Cost of Commercial/Industrial Development with Residential Fee Offset

A “residential fee offset” is calculated by (1) determining the number of homes that are associated with the employees generated by new commercial/industrial development and (2) calculating the residential fee revenues the District will collect from those homes (*note: the residential fee offset calculation assumes that all the homes associated with new employees are new homes; in reality, some new employees will live in existing homes*).

For purposes of calculating the residential fee offset, this Report estimates that the District will collect \$4.08 per square foot of future residential development. Subtracting the residential fee offset from the total school facility cost generated by commercial/industrial development produces a discounted school facility cost that takes into account revenues from “linked” residential units.

Table 1-17 calculates the facility cost of new commercial/industrial development while taking into account the revenues from linked residential units.

(continued on next page)

Table 1-17
School Facility Cost of New Commercial/Industrial Development
Discounted By Residential Fee Offset

Category	Dwelling Unit per Square Foot Com/Ind	Average Square Foot per Unit	District's Revenue per Square Foot Res. Dev.	Residential Offset per Com/Ind Square Foot	School Facility Cost per Square Foot Comm/Ind Development	Cost per Square Foot Less Offset
Banks	0.00052	1,421	\$4.08	\$3.01	\$7.17	\$4.16
Community Shopping Centers	0.00028	1,421	\$4.08	\$1.62	\$3.88	\$2.26
Neighborhood Shopping Centers	0.00050	1,421	\$4.08	\$2.90	\$6.87	\$3.97
Industrial Business Parks	0.00065	1,421	\$4.08	\$3.77	\$8.92	\$5.15
Industrial Parks	0.00025	1,421	\$4.08	\$1.45	\$3.42	\$1.97
Rental Self-storage	0.00001	1,421	\$4.08	\$0.06	\$0.15	\$0.09
Scientific R&D	0.00056	1,421	\$4.08	\$3.25	\$7.70	\$4.45
Lodging	0.00021	1,421	\$4.08	\$1.22	\$2.86	\$1.64
Standard Commercial Offices	0.00089	1,421	\$4.08	\$5.16	\$12.16	\$7.00
Large High Rise Com. Offices	0.00080	1,421	\$4.08	\$4.64	\$10.95	\$6.31
Corporate Offices	0.00050	1,421	\$4.08	\$2.90	\$6.82	\$3.92
Medical Offices	0.00079	1,421	\$4.08	\$4.58	\$10.82	\$6.24

As the table shows, the school facility cost of all categories (except rental self-storage) is greater than the Government Code maximum of \$0.66 per-square-foot even when that cost is discounted by revenues from linked residential units. Therefore, the District is justified in collection the Government Code maximum of \$0.66 per square foot for all categories of commercial/industrial development (except rental self-storage). Fee amounts for self-storage and other low-employee-generating businesses should be examined on a case-by-case basis.

For illustrative purposes, the Report will compare the school facility cost generated by 140,000 square feet of new community shopping center development to the fee revenue it will provide to the District. This analysis is valid, however, for all types of commercial/industrial development except rental self-storage.

If the District charges \$0.66 per square foot of commercial/industrial development, it will collect \$92,400 from the 140,000 square feet of community shopping center development. Assuming that all of the employees of the community shopping center development live in new homes, the District will also collect \$229,496 in revenue from residential developer fees (140,000 square feet x 0.00153 employees per square foot x 22% employees that live in District x 0.84 housing units per employee x 1,421 square feet per housing unit x \$4.08 revenue from developer fees). The 140,000 square feet of community shopping center development will create a school facilities cost of \$543,200 (140,000 square feet x \$3.88 school facility cost per square foot of community shopping center).

Table 1-18 compares the school facility costs generated by 140,000 square feet of community shopping center development to the fee revenues it provides to the District.

Table 1-18
Comparison of Facility Cost and Fee Revenue Generated by
New Community Shopping Center Development

	Fee Revenues	Facility Costs	Total Revenues (Costs)
140,000 square feet of community shopping center development	\$92,400	\$543,200	(\$450,800)
New housing units associated with the development	\$229,496	N/A	\$229,496
Total	\$321,896	\$543,200	(\$221,304)

As the table shows, fee revenue from community shopping center development will cover only 59.3 percent of the school facility cost it generates, even when that cost is discounted by the revenues from linked new housing units.

All categories of commercial/industrial development (except self-storage) will generate more facility cost than fee revenue, because they all generate a facility cost greater than \$0.66 per square foot even when fees from linked residential units are considered. Fee amounts for self-storage and other low-employee-generating businesses should be examined on a case-by-case basis.

End of Section

V. FINDINGS

This Section shows that the District meets the requirements of Government Code Section 66001 regarding the collection of developer fees and summarizes other potential funding sources for the District's capital projects.

A. Government Code Section 66001(a)(1)—Purpose of the Fee

The purpose of collecting fees on residential and commercial/industrial development is to acquire funds to construct or reconstruct school facilities for the students generated by new residential and commercial/industrial developments.

B. Government Code Section 66001(a)(2)—Use of the Fee

The District's use of the fee will involve constructing new school facilities. In addition, the fee may be used to construct additional permanent facilities on existing school campuses, and/or constructing and/or reconstructing school campuses. The District will also need to purchase or lease portable classrooms to use for interim housing while permanent facilities are being constructed.

Revenue from fees collected on residential and commercial/industrial development may be used to pay for any of the following:

- (1) Land (purchased or leased) for school facilities,
- (2) Design of school facilities,
- (3) Permit and plan checking fees,
- (4) Construction or reconstruction of school facilities,
- (5) Testing and inspection of school sites and school buildings,
- (6) Furniture for use in new school facilities,
- (7) Interim school facilities (purchased or leased) to house students generated by new development while permanent facilities are being constructed,
- (8) Legal and administrative costs associated with providing facilities to students generated by new development,
- (9) Administration of the collection of developer fees (including the costs of justifying the fees), and
- (10) Miscellaneous purposes resulting from student enrollment growth caused by new residential development.

C. Government Code Section 66001(a)(3)—Relationship Between Fee's Use and the Type of Project Upon Which the Fee is Imposed

Future residential development will cause new families to move into the District and, consequently, will generate additional students in the District. As shown in Section I.B. of this Report, adequate school facilities do not exist for these students. Future residential development, therefore, creates a need for additional school facilities. The fee's use (acquiring

school facilities) is, therefore, reasonably related to the type of project (future residential development) upon which it is imposed.

New commercial/industrial development will cause new workers to move into the District. Because some of these workers will have school-age children, commercial/industrial development will also generate new students in the District. As shown in Section I.B. of this Report, adequate school facilities do not exist for these students. New commercial/industrial development, therefore, creates a need for additional school facilities. The fee's use (acquiring school facilities) is, therefore, reasonably related to the type of project (new commercial/industrial development) upon which it is imposed.

D. Government Code Section 66001(a)(4)—Relationship Between the Need for the Public Facility and the Type of Project Upon Which the Fee is Imposed

The District's current 7-8 enrollment is larger than its pupil capacity. The District, therefore, does not have sufficient existing capacity to house current students and those students generated by future development. Future residential and commercial/industrial development in the District will generate additional students and, consequently, a need for additional school facilities. A relationship exists, therefore, between the District's need to build additional school facilities and the construction of new residential and commercial/industrial development projects.

E. Government Code Section 66001(b)—Relationship Between the Fee and the Cost of the Public Facility Attributable to the Development on Which the Fee is Imposed

This Report demonstrates that the school facility cost attributable to future residential development is \$9.65 per square foot. Level I fees of \$4.08 per square foot on residential development are, therefore, fully justified.

This Report also demonstrates that the school facility costs attributable to all categories of commercial/industrial development except rental self-storage range from \$1.64 per square foot to \$7.00 per square foot, even when fees from linked residential units are accounted for. Level I fees of \$0.66 on these types of development are, therefore, fully justified. The school facility cost attributable to rental self-storage units is \$0.09 per square foot when fees from linked residential units are accounted for. Fees for this type and other low-employee-generating types of development should be examined on a case-by-case basis.

All school facility costs and fees in this Report are calculated on a per-student basis to ensure that future developments only pay for impacts they cause.

The total cost of providing school facilities for existing unhoused students, as documented in Table 1-5 and Table 1-8 is \$5,001,830. According to District administrators, the amount of funds currently available in the District's capital facility accounts for the construction of new school facilities totals \$235,500. Comparing all of the available funds in the District's capital facility accounts (\$235,500) to the cost of providing school facilities for existing unhoused students (\$5,001,830) indicates that the District's total new construction facility costs exceed the current funds available for acquiring new school facilities.

F. Other Funding Sources

The following is a review of other potential funding sources for constructing school facilities.

1) General Fund

The District's General Fund budget is typically committed to instructional and day-to-day operating expenses and not used for capital outlay uses, as funds are needed solely to meet the District's non-facility needs.

2) State Programs

The District can explore if it qualifies for eligibility under the 1998 Leroy F. Greene School Facility Program. Even projects funded at 100 percent of the State allowance, however, experience a shortfall between State funding and the District's actual facility needs. State funds for deferred maintenance may not be used to pay for new facilities. State law prohibits use of lottery funds for facilities.

3) General Obligation Bonds

School districts can, with the approval of two-thirds or 55 percent of its voters, issue general obligation bonds that are paid for out of property taxes. On November 4, 2014 the District passed a general obligation bond Measure G to fund \$13 million in repair and improvement projects throughout the District.

4) Parcel Taxes

Approval by two-thirds of the voters is required to impose taxes that are not based on the assessed value of individual parcels. While these taxes have been occasionally used in school districts, the revenues are typically minor and are used to supplement operating budgets.

5) Mello-Roos Community Facilities Districts

This alternative uses a tax on property owners within a defined area to pay long-term bonds issued for specific public improvements. Mello-Roos taxes require approval from two-thirds of the voters (or land owners if fewer than 12) in an election.

6) Surplus Property

The District does not own any surplus property that could be used to finance additional school facilities.

End of Section

VI. RECOMMENDATIONS

This Report recommends that the District levy the maximum statutory fee authorized by Government Code Section 65995, up to \$9.65 per square foot of residential development. The Report also recommends that the District levy the maximum fee as authorized by Government Code Section 65995, (currently \$0.66 per square foot) on all categories of commercial/industrial development except rental self-storage, as those categories of development create school facility costs ranging from \$1.64 to \$7.00 per square foot of future development, even when fees from linked residential units are accounted for. Developer fees for rental self-storage and other types of low-employee generating developments should be examined on a case-by-case basis.

These recommendations are based on the findings that residential and commercial/industrial development (except for rental self-storage) creates a school facility cost for the District that is larger than the revenue generated by charging these fees.
